

**ME 433 COURSE PROFILE****DEGREE PROGRAM:** Mechanical Engineering

<b>COURSE NUMBER:</b> ME 433	<b>COURSE TITLE:</b> Advanced Energy Solutions
<b>REQUIRED COURSE OR ELECTIVE COURSE:</b> Elective	<b>TERMS OFFERED:</b> Fall, Winter (2 sections each semester)
<b>TEXTBOOK / REQUIRED MATERIAL:</b> No required textbook. Recommended texts: Energy Studies, 2nd Edition, Shepherd, W., Shepherd D.W. Imperial College Press, London, 204 ISBN #1860943225 and Intro to Engin and the Environ, 1st Edition, E.S. Rubin, McGraw Hill, 2001	<b>PRE / CO-REQUISITES:</b> MECHENG 235. I (3 credits)
<b>COGNIZANT FACULTY:</b> M. Wooldridge	<b>COURSE TOPICS:</b>  <ol style="list-style-type: none"> <li>1. Energy resources and concerns</li> <li>2. Review of thermodynamic conservation principles</li> <li>3. Fundamentals of combustion</li> <li>4. Power generation for the transportation sector, vehicle emissions</li> <li>5. Petroleum resources, high efficiency, high power density &amp; low emission engine strategies</li> <li>6. Bio-fuels and hydrogen</li> <li>7. Coal, stationary power generation, process heating &amp; manufacturing</li> <li>8. Batteries, hybrid electric vehicles &amp; the grid, fuel cells</li> <li>9. Solar energy (thermal and direct conversion)</li> <li>10. Nuclear energy</li> <li>11. Geothermal energy</li> </ol>
<b>BULLETIN DESCRIPTION:</b> Introduction to the challenges of power generation for a global society using the thermodynamics to understand basic principles and technology limitations. Covers current and future demands for energy; methods of power generation including fossil fuel, solar, wind and nuclear; associated detrimental by-products; and advanced strategies to improve power densities, efficiencies and emissions.	
<b>COURSE STRUCTURE/SCHEDULE:</b> Lecture: 2 per week @ 1 hour 20 minutes	

<p><b>COURSE OBJECTIVES:</b> for each course objective, links to the Program Outcomes are identified in brackets.</p>	<ol style="list-style-type: none"> <li>1. To make students familiar with the basic energy transfer processes that govern existing and proposed methods of power generation for a global society. [1, 4]</li> <li>2. To make students familiar with the traditional and non-traditional fuel sources in terms of energy content, accessibility, required processing steps and projected remaining reserves. [1, 4, 7]</li> <li>3. To teach the evaluation of heat, work and energy transfer steps associated with advanced powertrain strategies and stationary power systems. [1, 2, 6]</li> <li>4. To teach the fundamental thermodynamics, physics and chemistry relevant to evaluating combustion emissions and efficiencies. [1, 2, 6]</li> </ol>
<p><b>COURSE OUTCOMES:</b> for each course outcome, links to the Course Objectives are identified in brackets.</p>	<ol style="list-style-type: none"> <li>1. Identify and quantify the important energy transfer for solar, nuclear, fossil fuel combustion and wind power generation schemes. [1, 3, 4]</li> <li>2. Quantify the limiting efficiencies for solar, nuclear, fossil fuel combustion and wind power generation schemes. [1, 3]</li> <li>3. Quantify the energy densities/specific energy content of a fuel. [2]</li> <li>4. Identify the opportunities and challenges of advances in energy carriers used for energy storage and delivery. [1, 3]</li> <li>5. Identify the thermodynamic conditions limiting vehicle emissions using fossil and biofuels. [4]</li> </ol>
<p><b>ASSESSMENT TOOLS:</b> for each assessment tool, links to the course outcomes are identified</p>	<ol style="list-style-type: none"> <li>1. Regular homework problems [1-5]</li> <li>2. Two exams [1-5]</li> <li>3. Final written project report [1-5]</li> <li>4. Video/oral presentation [1-5]</li> </ol>

PREPARED BY: M. Wooldridge

LAST UPDATED: 5/11/2023 – K. Oldham
